
MESSAGE FROM EDITORIAL BOARD

10.5005/apgh-6-3-vi

Dear readers,

Warm greetings from the editorial board of APGH!

The ISPGHANCON scientific gala (Oct 4–6, 2024) was packed with “the science of tomorrow”. Many of us furiously jotted down notes, found collaborators for research and vowed for a presentation the next year. Now let us sit back, relax and appreciate the latest issue of APGH, “the science of today”.

An international original article, the first of its kind in APGH, by Yadav AS et al. highlights the bedside application of procalcitonin in prognostication of ascites. A review article highlights that despite the enigma, urea cycle defects are seldom discussed in meetings and symposia. The issue covers an interesting insight into this problem. With increasing gadgets, the ingestion of magnets is becoming an increasing nuisance. The issue covers a case report on the same. Sometimes, we seldom consider the obvious suspect. The other case report serves as an eye-opener to a usual presentation of disease.

Once again, many congratulations to all the quiz winners.

As the winter sets in, we suddenly realize that the year is coming to an end. One should ask oneself “Have I published enough this year? “Have I contributed to science this year?” With this inspiration, we urge all students, researchers and clinicians to submit original studies to our growing journal.
